

Project Design Phase Solution Architecture

Date	29 September 2026
Team ID	SWTID-2026-4968
Project Name	Script - controlled ACL - Restrict Record Access Based On Field Value
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

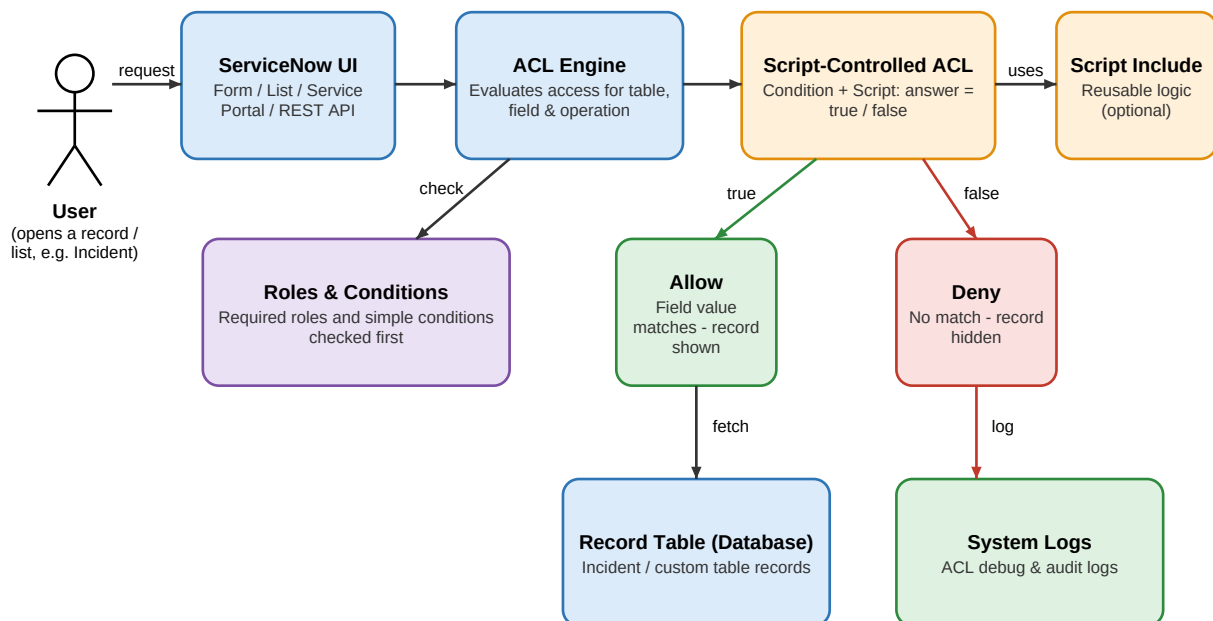

Figure 1: Architecture and data flow of the Script-controlled ACL (restrict record access based on field value) application
