

Script - Controlled ACL

Restrict Record Access Based On Field Value

Team ID: SWTID-2026-4968

1. CUSTOMER SEGMENT(S)

Who is your customer?

ServiceNow users, administrators, and application teams who need controlled record access.

6. CUSTOMER CONSTRAINTS

What constraints prevent your customers from taking action or limit their choices of solutions?

Users may need access to records only when specific field values meet defined conditions.

5. AVAILABLE SOLUTIONS

Which solutions are available to the customers when they face the problem or need to get the job done?

Standard ACL configuration and scripted ACL logic can be used to control record access.

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done (or problems) do you address for your customers?

Restrict access to records based on a field value while allowing authorized users to access permitted records.

9. PROBLEM ROOT CAUSE

What is the real reason that this problem exists?

Records may contain different levels or types of information, so access must depend on the value stored in a relevant field.

7. BEHAVIOUR

What does your customer do to address the problem and get the job done?

Administrators configure an ACL and use a script to evaluate the required field value before granting access.

3. TRIGGERS

What triggers customers to act?

A requirement to prevent users from viewing or accessing records that do not meet the defined field-value condition.

10. YOUR SOLUTION

If you are working on an existing business, write down your current solution first...

Create a scripted ACL that checks the target field value and grants or denies record access accordingly.

8. CHANNELS of BEHAVIOUR

8.1 ONLINE — What kind of actions do customers take online?

ServiceNow application, ACL configuration, and record access testing.

4. EMOTIONS: BEFORE / AFTER

How do customers feel when they face a problem or a job and afterwards?

Before: concerned about unauthorized record access → After: confident that access is restricted according to the field value.

Purpose / Vision

Scripted ACL — Restrict Record Access Based On Field Value | Team ID: SWTID-2026-4968
